## Version History

Version	Date	Description	Edited by
1.0	05.10.2023	Initial Version	BIBA
1.1	31.11.2023	Draft for Consortium sharing	BIBA
1.2	20.12.2023	Final Draft with integration of comments from reviewers	BIBA
1.3	22.12.2023	Final Version	BIBA
1.4	14/06/2024	Submitted to the commission	Nejib Moalla

## **Executive summary**

This deliverable reflects the effort performed by the ENHANCE partners mainly in WP2 (development) for the creation of the learning materials for the topic Quality 4.0. The deliverable reports on the list of all the courses and related activities recommended by all the stakeholders (academic partners, industrial partners). For the topic Quality 4.0, 14 activities have been developed. The partners have adopted an iterative development process based on refining the first version of each activity through subsequent cycles.

## Table of Tables

Table 1: List of activities for the topic Quality 4.0.....	8
--	---

## 1. Introduction

This document is developed as part of the ENHANCE project in the pilot 3 of Quality engineering. The content describes all developed courses and related activities for the topic Quality 4.0, providing a comprehensive overview of the curriculum designed to enhance quality management in the era of Industry 4.0. It includes detailed course descriptions, learning materials, and the integration of advanced technologies such as data analytics and IoT in quality processes. Additionally, the document outlines practical activities and case studies that enable participants to apply theoretical knowledge in real-world scenarios in Quality engineering.

### 1.1. Purpose of the document

This document aims to describe all the courses and related activities for the topic Quality 4.0. The following figure depicts the list of all the activities. More information about the activities will be given in the next chapter.

Table 1: List of activities for the topic Quality 4.0

Quality 4.0	Course 5  Advanced PSS Quality Design	Act 5.1: Integrated Systems Thinking: Introduction to Model-Based Systems Engineering
		Act 5.2: Non-Conformities RCA and Quality gates design
		Act 5.3: QC model design
		Act 5.4: Design for X applied for Quality
		Act 5.5: IoT and BPM for Integrated VSM
	Course 6  QC analytics for Zero defect manufacturing	Act 6.1: Integrated process improvement
		Act 6.2: Quality Process maturity self-assessment and lifecycle management
		Act 6.3: Inspection Methods, sampling, Inspection Plan
		Act 6.4: Prescriptive and adaptive decision for Quality Control
		Act 6.5: Quality Planning, Control and Management functions
	Use Cases	Act U.3.1: Sensor's sensitivity analysis and selection
		Act U.3.2: Non-Conformities RCA and Quality gates design
		Act U.3.3 IoT and BPM for Integrated VSM
		Act U.3.4 Process maturity self-assessment and lifecycle management
		Act U.3.5 Prescriptive and adaptive decision for Quality Control

### 1.2. Reference documents

D1.1, D2.1 and D1.5

### 1.3. Applicability

This document will be used by interested (from EU, Erasmus PC, etc.) partners to have an overview about all the developed activities and the related details on the LeL Platform. The document is public

### 1.4. Definitions

N/A

### 1.5. Structure of the document

This document is organized in 5 sections:

- Section 1: Introduction
- Section 2: Enhance project overview
- Section 3: List of activities developed for course 1 titled Advanced Quality strategies
- Section 4: List of activities developed for course 2 titled QC analytics for Zero defect manufacturing
- Section 5: List of activities developed as use cases

#### **1.6. List of acronyms**

BPM	(Business Process Management)
CMMI	Capability Maturity Model Integration
IoT	Internet of Things
QC	Quality Control
PSS	Product Service System
RCA	Root Cause Analysis
VSM	Value Stream Mapping

## 2. ENHANCE project overview

ENHANCE – strENgtHening skills and training expertise for TunisiAN and MorocCan transition to industry 4.0 Era – is an Erasmus Plus project founded under the KA2 Cooperation for innovation and the exchange of good practices (Capacity Building in the field of Higher Education) programme by the European Commission under Grant Agreement N° 619130, to be conducted in the period January 2021 until January 2024. It engages 7 partners from 5 countries with a total budget of 779k€. Further information can be found at <http://eplus-enhance.eu/>. Figure 1 gives an overview of the ENHANCE project organization.

The emergence of industry 4.0 concepts and applications brings new paradigms impacting all the industrial business domains when they need to conduct successful digital transformations or increase workshop connectivity. The evolution of Maintenance, Production and Quality Engineering (MPQ 4.0) represents the main application domains where Industry 4.0 produces effective beneficial results. Figure 1 presents the overall ENHANCE project organization.

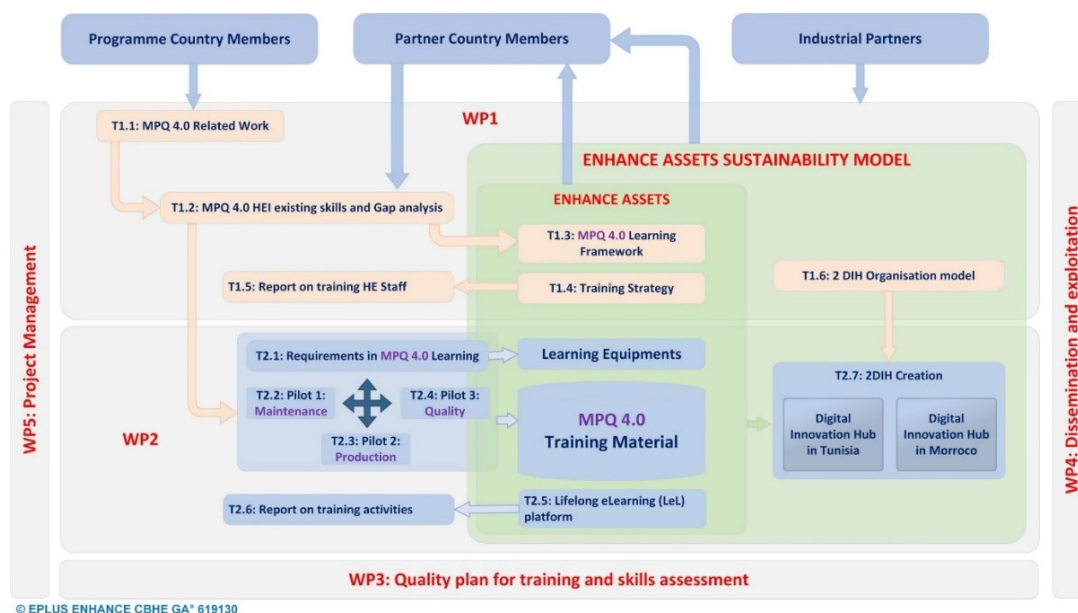

Figure 1: ENHANCE project organization.

The ENHANCE project focuses on building new MPQ training capacities at Higher Education Institutions (HEI) in Tunisia and Morocco to establish interactions between the following stakeholders:

- European universities and research institutions (from France, Germany and Portugal) confirmed MPQ 4.0 competencies, training materials, collaborative research projects, full operational Digital Innovation Hubs (DIH), technology transfer experiences, etc.
- Partner country universities (from Tunisia and Morocco) with teaching and training activities in MPQ and existing connections with their local industrial partners.

The ENHANCE project will create several outputs and two primary tangible outcomes:

- New MPQ 4.0 equipment and training materials developed in connection with the existing training programmes and consolidated through three industrial pilots. The new material will be used to train the trainers and the students in the different partner country universities.
- Two DIHs, one in Tunisia and one in Morocco to sustain the project outcomes through their reuse for training in industry.

ENHANCE aims to become the reference model for creating effective and sustainable training material for MPQ 4.0 in both partner countries with content approved by academia and industry.

### 3. Course 1: Advanced PSS Quality Design

#### 3.1. Course objectives

This course on Advanced PSS Quality Design aims to equip participants with a comprehensive understanding about Model-based system engineering, Non-Conformities RCA and Quality gates design, Quality control model design, Design for X applied for Quality, IoT and BPM for Integrated VSM.

#### 3.2. Presentation of the list of activities

##### 3.2.1. Act 5.1 Integrated systems thinking: Introduction to Model-Based Systems Engineering

- Objectives: Introduction to Model-Based Systems Engineering, Requirements engineering and the use of ARCADIA, CAPELLA, UML and SYSML
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=30>

Figure 2: Act 5.1 Integrated systems thinking-Introduction to Model-Based Systems Engineering – content example

## Learning Activity Syllabus

Co-funded by the  
Erasmus+ Programme  
of the European Union

<b>ENHANCE Domain</b>	Quality 4.0

### 3.2.4. Act 5.4 Design for X applied for Quality

- Objectives: This activity presents the basic concept and principles of Design for X, their practices, and tools. Particularly, among the several approaches of the design for X, the focus is on the design for X for Quality in the context of Industry 4.0, taking into consideration different aspects and context such as the resilience, agility, maintainability, sustainability, etc.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=12>

(access credentials are available for EC reviewers)

**1.1. Definition**

Design for X (DfX) means **D**esign for **eX**cellence. It is a set of technical guidelines that may be applied during the design of a product for the optimization of a specific aspect of the design. (PMBOK Guide).

Uses best practices and standards to avoid errors in the design and production processes

↓

Control and improve the product's final characteristics

### 3.2.5. Act 5.5 IoT and BPM for Integrated VSM

- Objectives: This activity presents the basic concept and principles of lean management 4.0 and VSM 4.0, their practices, and tools. It is based on considering that Value Stream Mapping in industry 4.0 is a highly interactive, visible process, which illustrates the steps required to deliver a product or service. The content is thus designed to help businesses to identify and remove/reduce waste in their daily operations based on sensors, IT and IoT.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=6>

(access credentials are available for EC reviewers)

**Visual management 4.0**

Enhance transparency by transferring targets, standards, and specifications into a visual representation. deviations can be recognized at an early stage to implement countermeasures accordingly.

**5S & Zoning**

5S is a five-step organization technique to create and maintain an intuitive workplace.

- Sort** (Seiri): Separate necessary items from the workplace.
- Set In Order** (Seiton): Arrange items to promote efficient workflow.
- Shine** (Seiso): Clean the work area to its original state.
- Standardize** (Seiketsu): Set standards for consistency, organization, and safety.
- Sustain** (Shitsuke): Maintain and improve standards.

**5S & Zoning 4.0**

AR replace physical shadow boards, as virtual elements guide operators where to place tools.  
RFID ensures the identification and the localization of objects which reduces search time.  
RFID tags store instructions for cleaning tools and objects appropriately.

**Andon boards**  
visualizing status and disruptions in production.  
display actual and target values to reveal deviations.

**Digital Andon Boards 4.0**  
visualize complex data and processes in real-time retrieved from mobile devices supports a location-independent access and use.

## 4. Course 2: QC analytics for Zero defect manufacturing

### 4.1. Course objectives

This course on QC analytics for Zero defect manufacturing aims to equip participants with a comprehensive understanding about: Integrated process improvement, Quality Process maturity self-assessment and lifecycle management, Inspection Methods, sampling, Inspection Plan, Prescriptive and adaptive decision for Quality Control, Quality Planning, Control and Management functions, Sensors sensitivity analysis and selection, Non-Conformities RCA and Quality gates design, IoT and BPM for Integrated VSM, Prescriptive and adaptive decision for Quality Control.

### 4.2. Presentation of the list of activities

#### 4.2.1. Act 6.1 Integrated process improvement

- Objectives: This activity presents the Integrated process improvement concept and tools. It provides details about the CMMI for process improvement, Process Mapping and Process architecture and improvements.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=16>

(access credentials are available for EC reviewers)

<b>Prerequisites (previous modules that student should attend)</b>	N/A									
<b>Total duration (Hrs)</b>	3									

#### 4.2.5. Act 6.5 Quality Planning Control and Management functions

- Objectives: It addresses the concepts related to the reduction in the complexity of product quality planning for the customers and organizations, A means for organizations to easily communicate product quality planning requirements to suppliers.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=45>

(access credentials are available for EC reviewers)

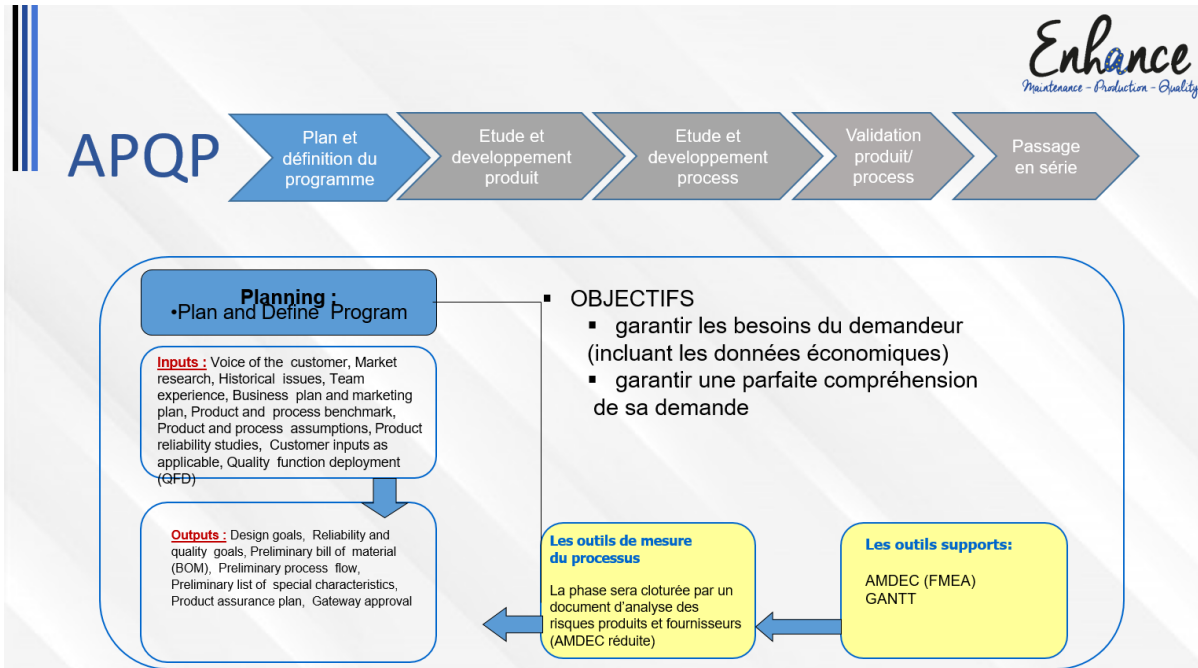

Figure 11: Act 6.5 Quality Planning Control and Management functions – content example

<b>ENHANCE Domain</b>	Qualite 4.0							
<b>Skill Set</b>	QC Analytics for Zero Defect Manufacturing							
<b>Activity Title</b>	Quality Planning, Quality Control, Quality management fonctions – Functions							
<b>Activity Acronym</b>	Act_6.5							
<b>Activity Description</b>	The activity addresses the concepts the reduction in the complexity of product quality planning for the customers and organizations . A means for organizations to easily communicate product quality planning requirements to suppliers.							
<b>Keywords</b>	Quality management fonctions (QMF),Quality Planing (QP) ,Advanced Product Quality Planning (APQP),Advanced Product Quality Planning and Control Plan (APQP&CP)							
<b>Teaching task related to I4.0</b>	<b>Topics</b>	<b>Teaching Plan</b>				<b>Learning Path</b>		
	<b>Hard Skills</b>	<b>Delivery Method (gamification, case study, simulation...)</b>	<b>Teaching Material</b>	<b>Duration (Hrs)</b>	<b>Soft Skill</b>	<b>Assesment</b>	<b>If FAIL goes to</b>	<b>If PASS goes to</b>
<b>TASK 1: theories and applications for Quality management</b>	to be able to: 1. Define the quality organization function. 2. To discuss the quality management delegation process. 3. To present different quality organizational structures.	.Presentation .Infographic communication	ppt slides white papers	2	.Problem Solving .Critical thinking	Quiz	Task 1 (repeat until done)	
<b>TASK 2:Quality planing</b>	to be able to: 1. To emphasize the importance of planning in the quality management system. 2. To compare and contrast formal and informal planning. 3. To provide a systematic approach to planning.	.Presentation .Infographic communication	ppt slides white papers	2	.Problem Solving .Critical thinking .Team working	Quiz	Task 3 (repeat until done)	
<b>TASK 4: Advanced Product Quality Planning</b>	to be able to: facilitate communication between all persons and activities involved in a program and ensure that all required steps are completed on time, with a high quality-of-event, at acceptable cost and quality levels.	.Presentation .Infographic communication	ppt slides white papers	2	.Problem Solving .Critical thinking .Team working	Quiz	Task 4 (repeat until done)	
<b>TASK 4: Advanced Product Quality Planning</b>	To be able to applied Advanced Product Quality Planning (APQP) : 1-Plan and define 2-Product design and developpement 3-Processus design and developpement 4-Product and Processus validation 5-Feedback assement and corective plan	.Presentation .Infographic communication . case study	ppt slides white papers	4	.Problem Solving .Critical thinking .Team working			
<b>Meta Skills</b>	to be able to provide general guidelines for ensuring that Advanced Product Quality Planning is implemented in accordance with the requirements of the customer. It does not give specific instructions on how to arrive at each APQP or Control Plan entry, a task best left to each organization							
<b>Module Outcomes</b>	Participants will be able to identify most situations normally occurring either in the early planning, design phase, or process analysis, there will be questions that arise.							
<b>Target Group (students, workers...)</b>	Master students	SME personnels						
<b>Assessment Method</b>	Project report, Project presentation, Assessment rubric for teamwork							
<b>Teaching Material</b>								
<b>Equipment</b>								
<b>Multimedia</b>								
<b>Content URL</b>								
<b>Class requirements (equipment that participants should bring)</b>								
<b>Prerequisites (previous modules that student should attend)</b>	ACT 6.1	ACT 6.3	ACT6.2	ACT 5.4				
<b>Total duration (Hrs)</b>	12							

## 5. Use cases

### 5.1. Course objectives

The objective of the Use Cases for Quality 4.0 is to demonstrate:

- The versatile integration of digital and analogical sensors and related mechanisms for data handling (acquisition, exploration, analysis, etc.).
- The implementation of quality gates concepts for selected industrial processes using QC data.
- The modelling, simulation, execution and optimisation of quality related business processes
- The employment of decision-making processes to improve the quality of manufacturing process.

### 5.2. Presentation of the list of activities

#### 5.2.1. Act U.3.1 Sensors sensitivity analysis and selection

- Objectives: This task aims at investigating the set of processes requested to make use of digital and analogical sensors. It covers the signal / data acquisition, data exploration, event detection, machine learning algorithms selection and application, etc.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=38>

(access credentials are available for EC reviewers)

<b>Total duration (Hrs)</b>	12									

**5.2.4. Act U.3.4 Process maturity self-assessment and lifecycle management (not developed)**

**5.2.5. Act U.3.5 Prescriptive and adaptive decision for Quality Control**

- Objectives: This use-case provides how the decision-making process is employed to improve the quality of manufacturing process.
- Link on the LeL Platform: <https://lel.eplus-enhance.eu/course/view.php?id=27>

(access credentials are available for EC reviewers)

## Decision Support Systems

- **4. Knowledge-driven DSS:**
  - It suggests or recommends actions to targeted users (e.g., managers). This type of DSS has specialized problem-solving expertise relevant to a specific narrow task.
  - The "expertise" consists of knowledge about a particular problem domain, understanding of problems within that domain, and "skill" at solving one or some of these problems."
  - It provides factual and specialized solutions to situations using stored facts, procedures, rules, or interactive decision-making structures like flowcharts.

Figure 15: Act U.3.5 Prescriptive and adaptive decision for Quality Control – content example

## Learning Activity Syllabus

Co-funded by the Erasmus+ Programme of the European Union 

<b>ENHANCE Domain</b>	Quality 4.0				
<b>Skill Set</b>	Application of ML to support decision making process				
<b>Activity Title</b>	Prescriptive and Adaptive Decision for Quality Control				
<b>Activity Acronym</b>	Act_U3.5				
<b>Activity Description</b>	This use-case provides how the decision making process is employed to improve the quality of manufacturing process.				
<b>Keywords</b>	Decision Support	Machine Learning	Business Analytics		

Teaching task related to I4.0	Topics		Teaching Plan				Learning Path		
	Hard Skill	Delivery Method (gamification, case study, simulation...)	Teaching Material	Duration (Hrs)	Soft Skill	Assesment	If FAIL goes to	If PASS goes to	
<b>1. Overview of Decision Support Systems</b>	Brief introduction into the decision support systems, including core types of decision support systems. An introduction about Data Sets and its features.	Lecture Group Discussion	ppt file	20 min.	.Problem Solving .Critical thinking .Team working .Presentation .Infographic communication	Question 1	Task 3 (MDIS)	task 2 (SND)	
<b>2. Practical Example Scenario</b>	In this Practical Example Scenario ML is applied to support the decision making process.	Lecture, Live Demonstration Group Discussion, Individual Assistance	ppt file, code snippets, dataset	1 h					

<b>Meta Skills</b>					
<b>Module Outcomes</b>	Participants will be able to apply ML to support the decision making process.				
<b>Target Group (students, workers...)</b>	Master students	SME personnels

<b>Total duration (Hrs)</b>	1,5 h				

## 6. Conclusion

For the topic Quality 4.0, 14 activities have been developed. The partners have adopted an iterative development process based on refining the first version of each activity through subsequent cycles. The list of activities reflects the finding from the gap and needs analysis executed based upon the results from the first workshop with industrial stakeholders. Additional Workshops and several discussions have been organised (in industrial plants, with trainers ...) to evaluate, refine and validate the gaps and therefore the activity contents needed.
